Prewords

This document **doesn't** provide **warranty or support** on existing framework, it is a discussion and outline of vested fee's agreed upon for the use of **TCP/IP** – Which is the protocol listed on M8747409 – 1/1/1897 – for **senate interception** unlike **TPP/IP** on M8747409 – 1/1/1898 the public transient variegate.

There is correlating data stored on the global passport system in public
 article files on the **Military Special Indices Code** on passport
M8747409 – 8/12/78 – Simon Antony Roberts.

Agreements

There is an agreement articles on the mentioned passport which dates back to the 1980's on **comp.protocol on Usenet**; this is between **Vinton Cerf + Dr. Simon Antony Roberts** which is the public article, as this is a networking topology agreement; Mr Vinton Cerf, is **only responsible for his own person and personal family share of the agreement**, this means it is by **honour or merit** you follow up paying the zoning vesture, which is held by my Nobel Court of the family of Xaies.

Zoning is how machine occupy and share the same location and it is exactly the same as the zone for navigation with starships with the same zone wired into the internet so it can **dial interstellar** without any base station via *rimrouting*.

The **agreement between Vinton Cerf + Dr. Simon Antony Roberts** is **0.50 AUD** is to be paid per **TLD/gTLD/Ipv4/Ipv6 x 1yr** as well as **per 1Tb block of data**, which is as per the fact there is not a *single trading fiscal binomial* **credit** which zone is normally paid in.

You will find this agreement in the public articles on this internationally accessible **Military** Speciality Class Passport! (See Above)

The agreement is *binding to all uses of the the term*: **Internet + Intranet + Transnets** and up to the *provider to provision correct zone fee allocations* on the *payment gateway* provided at: <http://zoning.ordinance.space!>

Vestured Fee's Outlined

The following fees' are due for the *court vestures for zoning allocation* which is how machine's share the same occupancy of space and a dead zone is when no machine will power up or function even down to basic systems like *plates, knives, forks and spoons and cups*. The Following fee's are due to **Universal Basis** of the **Internet + Intranets + Transnets** stemming from **Earth (Arth)** based within the distribution of **ICANN/IANA!**

The following Fee's are due:

Ipv4 address	1 yearly	0.50 AUD per Year
Ipv6 address	1 yearly	0.50 AUD per Year
Realms (.coop+.mil+.io+.email+.space)	1 yearly	0.50 AUD per Year
Domains (TLD/gTLD)	1 yearly	0.50 AUD per Year
Data 1 Terrabyte Block	1 Unit/Block	0.50 AUD per Block

The vestured zoning fee's are not waiverable and are directly earned by your ownership and usage of the above listed networking nodes as part of the network topologies you utilize.

Failure too renumerate for zoning will result in a dead-zone this is when machine selectively or not at all work for you and your clients and outkeeping viewers online, this can also affect machines that do not or have in *no way direct networking connectivity* as it is all machine based zoning that allows the occupancy of the *physicality of the machine* and user as well as **environmental causalities**.

Zoning Fees' Payments

Payment is made only to **paypal to the Chronolabs cooperative** at the primary email of chronolabscoop@users.sourceforge.net; we ask you use the payment scheduler on <http://zoning.ordinance.space> to generate the **paypal invoices** as well as *schedule monthly debt or outsourcing fees*.

The Payment Scheduler will tabulate from a list of Ipv4 + Ipv6 + Realms + Domains the amount foo of debt upto the current day of processing and ask you whether you want to make payment of \$ xxx.xx *amount in AUD* out right as **the unwaiverable debt** or set up a scheduled invoice to make payment monthly on the debt owing.

The payment scheduler will then make a *second subscription paypal invoice* to the on going zone fee's as per your deployment and listing and will never allow any one of the items to be paid for twice; this will mean your zone once **the current debt is paid**, will have an *ongoing monthly subscription installment*.

Zoning Debt Payments

Your zoning fee debt payments on the lifetime of the registered list of domains in your category as well as realms and IP Addresses; will tabulate from their registration dates on whois, to the current day when being process and create an invoice for either two options, ongoing subscription payment of the debt, or outright payment of the debt you will have an option to select of either before you finish the processing of the paypal invoice or paypal monthly payment subscription.

Zoning Subscriber Payments

Your zoning fee payments on the lifetime of the registered list of domains or realms or IP Addresses as well as estimated Terrabyte blocks of data tabulate as part of the payment scheduler as a paypal invoice for a monthly, month by month subscription payment to the domain, this is ongoing and isn't ajustable, any further items will have to be scheduled in a seperate paypal invoice.
