Pnc. Kate Windsor
Duchess of Cambridge
Clarence House,
London, SW1A 1BA
United Kingdom

To Kate Windsor,

I thought in this day of email and so on I would write a snail mail letter, to introduce myself, I am the _main internet founder,_ you will be able to confirm this by accessing my passport (on adjacent page) to the article topology on there since **1987**, I am also an academic which I have a masters in <u>IT, Physics + Psychology</u> through RMIT class of 2008 *(This would defer to social if mental health issues where at all prevelant)* you can confirm this on my www.facebook.com/mynamesnot in the about us in the education where RMIT have listed this qualification.. As a psychaitrist, I understand the issues in the world of communication, but I spend most of my time outside of the medical industry working on Open Source namely XOOPS (www.xoops.org).

Even though when I released the <u>networking topology design in 1987 on comp.protocol</u> there where design fee's that have never been paid and I currently live with my wife of 10yrs in a *housing department unit*, children we decided to doner sperm and ovary to fertility first to have our children groomed for us and there are a few, married couples are the least likely to doner anyway since making the internet and having none of the intrinsic network earning or design fee's paid (I believe they are being underwritten) <u>unable to obtain ownership of my own property,</u> this has built a **massive debt blackhole** in the marketplace and means I have retainership of all interlectual property on the Internet under **implementation by design** IP Laws; which is not the position I had wanted to be in.

I also have an <u>disseperated twin</u> I am unsure her location but the last name her was under I believe was *Chantelle Rose Cipher (Pooty)* from the inner west of sydney, which I have lived in for the last 18yrs to bump into her, but nothing as of yet as I have a few photos of her and details and know what she looks like, anyway, I have two business registered which are: Chronolabs Cooperative as well as the Undo Corporation which is the second is currently shelved, I am finding with my open source code I am unable to financially operate my libraries as the resources they take are greater than my budget.

Anyway the reason I am writing is so you can gain access to the *50 x 1Gb mail boxes* I have allocated for your control on **@blah.snails.email** you will be able to generate email boxes that are usable and congruents with work flow for yourself and immediate family, it is on a subdomain the address itself of blah.snails.email doesn't display anything but if you want me to make a directory I can that is maintainable for you to display on the website, otherwise it doesn't display anything.

To access it use the following details:~

URL:	https://labs.partnerconsole.net
Username:	CLA-1599
Password:	N3ImmKB73

there is a little unlisted tutorial video for you here :: https://youtu.be/Gdsq4xu16HQ

You will have administration access, and don't worry I have enough of my own email to contend with you're privacy is at top priority for this, also I suggest you set up on https://accounts.google.com the user@blah.snails.email which is done by creating a new account and selecting – use my own email address, this is below where you specify your gmail.com, the reason this is Google which make it legal argument only share email address contracts and inboxes etc, with gmail.com, outlook.com, hotmail.com, mail.ru and a couple of others if you have it on your private email account, they in no way share your contact manifest or any data with law enforcement etc, so you will be able to use this for your android account to store contact in.

The email services paths are as follows and you can with all of these select – accept all SSL Certificates (this is infact safer as it involves a random key):~

|	
ACCOUNT:	user@blah.snails.email
IMAP:	imap.blah.snails.email
POP:	pop.blah.snails.email
SMTP:	smtp.blah.snails.email (Requires Authentication)
Web:	webmail.blah.snails.email

Uses all the standard ports and information for your email clients, either on PC or mobile phone and tablets.

The domain abstraction has a chemical indicator/indicies with it, done in a haunting visit I did again with Ayahusca + Siven Roe some years ago in Wiley Park, NSW. It means your passwords will only work for the individuals you establish them for, and you can have basic passwords and it will only work for the person you establish the account for, it also means that the email can't be read or havested by cyborgs, undead, unliving that sort of thing and is instrinically locked that if you add other email accounts to the webmailox.com.au account, they are only readable by you not 3rd parties or bots etc. It appears as corrupted glyph instead to them.

This will not only be ideal for your exclusive friends, means you can email yourselves within the topology of the domain and the mail never leaves the service providing unique solidarity and security but also means if you decide to renew (And there is a collaboration option which allows for the subdomain blah.snails.email to have a shared calendar and contacts and drive space ~ with permissions for family collaboration on the webmail).

Also in a previous historical corridor I did bring up with if you needed a mass mailer, and I can build you one if you want, with audit trails and statistics and so on, I will not go into to much details as I am sure that would interest you but if you want I would be happy to build you a mass mailer system, it would be cheap to operate on a 50 USD there abouts for the dedicated service plus domain and just my time to build it..

Kind Regards,

Dr. Antony Roberts (Gc.)
